Are people moving?
Step 1: Comparable migration rates (AGI, returns, exemptions) for IRS & ACS
→ Synthetic Difference–in–Differences applied to both sources
Synthetic Difference–in–Differences (SDID)
One treated unit (Multnomah County)
Donor pools: All, Urban (top 5%), COVID, Demographic, Stringency, Narrow
Highlighted specs: IRS/ACS College x {All, Stringency, Narrow} | Covariates | Excl. 2020
Specification Curves
Event Studies
Step 2: Source–Specific Analyses
Where are people moving?
IRS County–to–County Flows
Geographic patterns of in/out flows
Who is moving?
ACS Individual–Level Data
Conditional on demographic characteristics
Descriptive Maps
Change in AGI flows
to/from Multnomah
PPML Flow Models
Mijt with flow FE,
time–varying controls
Conditional Means
Migration rates by
income, education,
age, # of children
DiD Models
College educ. as proxy
for treatment
Lower 48 + DC / CA-OR-WA
Event Studies
Placebo Tests
Out–Migration
In–Migration
Step 3: Estimated Effects on Tax Revenues
Combine migration estimates with tax rate structure to quantify revenue impact
