Panel A: Data Source Comparison

IRS Statistics of Income (SOI)

+ Near–universal coverage (all tax filers)
+ Unambiguous residence (tax return address)
+ County–to–county flows with AGI
− No individual characteristics (age, educ.)
− Available only through 2022 (2 post years)
− Aggregate: county–pair is unit of observation

American Community Survey (ACS)

+ Individual–level data with demographics
+ Available through 2024 (4 post years)
+ Enables DiD with education as treatment proxy
− 1% sample: small N, measurement error
− Small counties suppressed (389 identified)
− Residence definition may capture temp. moves

Panel B: Migration Measures

Measure	Definition	IRS	ACS	Used In
Individual migration M_{hit}	1 if person h moved into (out of) county i in year t	——	✓ (389 counties)	**DiD**
County–pair flows M_{ijt}	Individuals, returns, or AGI moving from county i to county j in year t	✓	——	**PPML**
County migration rates M_{it}	In-, out-, and net in-migration rate for county i in year t	✓	✓	**SDID**

Key: County migration rates can be computed from both sources, enabling head–to–head comparison via SDID before using source–specific methods.

Units of Migration

AGI (income)
IRS: AGI
ACS: Household income

Returns (households)
IRS: Returns
ACS: Households

Exemptions (individuals)
IRS: Exemptions
ACS: Individuals
