Are people moving?
Step 1: Comparable migration rates (AGI, returns, exemptions) for IRS and ACS
→ Synthetic Difference–in–Differences applied to both sources
Synthetic Difference–in–Differences (SDID)
One treated unit (Multnomah County)
Donor pools: All, Urban (top 5%), COVID, Demographic, Stringency, Narrow
Highlighted specs: IRS / ACS College × {All, Stringency, Narrow},
with covariates, excluding 2020
Specification Curves
Event Studies
Step 2: Source–Specific Analyses
Where are people moving?
IRS County–to–County Flows
Geographic patterns of in/out flows
Descriptive Maps
Change in AGI flows
to/from Multnomah
PPML Flow Models
M_{ijt} with flow FE,
time–varying controls
Event Studies
Placebo Tests
Who is moving?
ACS Individual–Level Data
Conditional on demographic characteristics
Conditional Means
Migration rates by
income, education,
age, # of children
DiD Models
College education as
treatment proxy
Lower 48 + DC; CA/OR/WA
Out–Migration
In–Migration
Step 3: Estimated Effects on Tax Revenues
Combine migration estimates with the tax-rate structure
to quantify the revenue impact
